Reports to:	Product Manager
Reportees:	None
Office	Oxford
Location:	
Hours:	Full Time 40 hours per week
Salary:	£30,000 - £40,000
Contract:	Full Time - 6 month contract (potential to become permanent)

OXSIGHT Limited

OXSIGHT was founded in Oxford, UK in 2016 to transform the lives of people with visual impairment. Our founding members began their research at the University of Oxford in 2010, investigating how machine vision technology could benefit those with low vision.

Today, our team includes scientists and clinicians across many disciplines, such as ophthalmology, neuroscience, computer vision and machine learning, all working together to develop new products that let people live life to the fullest. Along the way, we have worked in partnership with leading global names in visual impairment and technology, including Google, The Royal National Institute of Blind People, the Guide Dogs Association, Royal Academy of Engineering, the National Institute for Health Research Invention for Innovation and Moorfields Eye Hospital.

You'll join us at an exciting time, as we launch our 2nd product, OXSIGHT Onyx. There are 700,000 people in the UK living with central vision loss and you'll be instrumental in helping us reach out, connect and manage their customer journey with OXSIGHT.

We are seeking a New Product Introduction Engineer to provide a bridge between the development and manufacture of a new electronic medical device to assist people with low vision.

Joining at an early stage of growth you will be responsible for making a range of manufacturing, supply chain and NPI decisions. There is the potential to move into a permanent role as the company continues to grow.

The product is heavily electronics focussed so it is important you have a background of working with complex hi-tech products with a good understanding of New Product Introduction processes and planning.

Experience of working with and developing relationships with suppliers will be vital.

Key Accountabilities

- Provide manufacturing partner support
- Creating and maintaining standard operating procedures within the production process
- Assisting the resolution of quality defects
- Assisting the continuous improvement culture of the business, including the development of new products.

Skills required

- HNC or above in either a Mechanical, Electrical or Mechatronic related field
- 2+ years of experience in an NPI / Manufacturing Engineering role or similar
- Based in a commutable distance of Oxford
- A flexible and can-do approach to work
- Ability to work on own initiative.
- Willingness to learn about our products and our customer types.
